Choosing the Right Phone Solution for Your Business:
On-Premise vs. Cloud-Based

The right phone solution plays an important role in the success of your business. There are two options to consider for your business phone solution: on-premise or cloud-based. Understanding the key differences between the two options can help you make the right decision for your business and to get the most value from your investment.

	On-Premise	Cloud-Based
	Your phone system is at your location and you are responsible for installing and maintaining.	Your phone system resides in the cloud using your Internet connection with no on-premise hardware or software to install or maintain except for phones.
$ Costs	Up to 40% more costly than cloud-based, requiring cabling, hardware, closet space, electric & cooling	No hardware costs except the phones themselves
	Pay in advance for planned growth	Pay ONLY for what you need & use
	Multiple locations require multiple phone systems	Multiple locations are supported by one phone system in the cloud
	Pay for all upgrades & maintenance	Most features & upgrades are included in cost
⟳ Installation	Time-intensive setup, requiring installing significant hardware	Quick & easy setup and installation

	On-Premise	Cloud-Based
Scalability	Harder to scale, requiring thorough planning (and a crystal ball)	Scales to your needs as you grow, using exactly what you need, when you need it
	Takes weeks or months to add or delete phone lines	Phone lines can be added or deleted in a matter of minutes
Maintenance	Requires an IT specialist to manage & make changes	Other than phones, no maintenance required
Upgrading Features	Time to market = Varies	Time to market = Immediate
	Upgrades require manual updates from an IT specialist	All upgrades are made available automatically through the cloud
Mobility	No mobile compatibility, making it more difficult to accommodate a mobile workforce	Anyone can connect from multiple devices with an Internet connection, making it easy to extend to a remote workforce
Disaster Recovery	Redundancy is possible, but costly	Built-in failover in the event of Internet or power loss
	Recovery is typically slower, negatively impacting customer experience	Calls automatically rerouted to other data centers so customer experience is not affected

With a cloud-based solution, your business can take advantage of the following benefits:

- Lower cost
- Faster setup
- Faster scalability
- More mobility
- Faster time to market with new technology
- Less maintenance
- More reliable disaster recovery
